

Uju Chinedum

Backend Engineer

Nigeria · +2348026718076 · ujuchimaraoke@gmail.com · github.com/Uju-Chinedum · linkedin.com/in/uju-chinedum

PROFILE

Backend Engineer with hands-on experience designing and building scalable, production-ready systems from the ground up. Specialises in REST API design, real-time systems, payment integrations, and database management using Node.js, NestJS, and TypeScript. Known for clean, maintainable code, strong problem-solving instincts, and the ability to own and deliver complete backend solutions independently.

TECHNICAL SKILLS

LANGUAGES

Python · JavaScript · TypeScript

FRAMEWORKS

Node.js · ExpressJS · NestJS

DATABASES

PostgreSQL · SQL · MongoDB / Mongoose

ORM

Prisma · Sequelize

TOOLING

REST APIs · WebSockets · Paystack · JWT · RBAC · Git/GitHub · Data Modelling · Testing & Debugging

WORK EXPERIENCE

Backend Engineer

ChopBeta · May 2025 – March 2026

- › Sole backend engineer — designed and built the entire system from the ground up using NestJS and TypeScript.
- › Architected scalable REST APIs covering multi-item menu browsing, order creation, and order management.
- › Integrated Paystack end-to-end for secure online payments and multi-item transactions.
- › Implemented real-time order and rider tracking via WebSockets for live status updates.
- › Designed robust error handling and notification system ensuring a smooth, reliable user experience.

Backend Developer

Wellat · Feb 2025 – March 2025

- › Built secure admin endpoints with NestJS for managing users, tokens, features, and transactions.
- › Implemented role-based access control (RBAC) for robust authorisation and security across services.
- › Designed modular services and DTO-driven architecture for maintainable, scalable code.
- › Delivered reliable transaction and feature management systems supporting efficient backend operations.

Backend Developer

Personal & Independent Projects · 2022 – 2024

- › Built backend systems and REST APIs using Node.js and ExpressJS for authentication, data management, and third-party integrations.
- › Worked with SQL and NoSQL databases to design and implement scalable, normalised data models.
- › Practised testing, debugging, and building maintainable backend services across multiple projects.

KEY PROJECTS

Prysm — SaaS Backend Platform

NestJS · TypeScript · PostgreSQL · Prisma ORM · JWT

Production-ready SaaS backend built with clean modular architecture. Features JWT-based authentication, structured AuthController/AuthService separation, Prisma ORM with PostgreSQL, CORS configuration, global API prefix, and extended Express Request typing for authenticated user context. Built to production standards from day one.

TicXpress — Event Ticketing Platform

NestJS · TypeScript · JWT Auth

Backend system enabling event organisers to list events and manage ticket applications. Covers full event management workflows, user flows, and JWT authentication.

Blog CMS — Final Year Project

Backend Development · Database Design · API Integration

Content management system developed as a final year project. Hands-on experience in backend architecture, database design, API integration, modular coding, and user authentication.

EDUCATION

B.Sc. Computer Science

University of Port Harcourt · 2024

Final year project: developed a Blog CMS covering backend architecture, database design, API integration, modular coding, user authentication, and building maintainable real-world systems.
